Wage Type Cockpit

Whether it is during GPLA checking or in-house audits, it often would be helpful to be able to provide information quickly about the parameters of your wage types. This is very hard to trace in the customising tables of your SAP system without relevant technical background knowledge.

Solution Description

HRFORCE Wage Type Cockpit displays the complex wage type settings in a clear, interactive list and enables navigating in detailed views.

Customer-specific tables for wage type settings are also supported.

Depending on the system settings, this solution also offers a maintenance mode that enables jumping directly to the corresponding tables. This also eases the work of internal support organisations, because a central maintenance interface for wage types is available. A usage list for wage types in forms and in the schema is also available.

A master sheet for each wage type can of course be issued.

Implemented Functionalities

CONVENIENT SELECTION

Selection also according to assessment module, processing, and evaluation class and accumulations etc.

ADJUSTABLE OUTPUT

Processing and evaluation classes and accumulations can be issued directly in the overview.

PRINT-OUT OF A WAGE TYPE MASTER SHEET

Prints a master sheet with the most important information

CLIENT TABLES FOR WAGE TYPES

Customer tables can also be integrated.

CUSTOMER-SPECIFIC EXPANSION

There is a class interface that enables customer output in five columns.

Client Advantages

The most important information for each wage type at a glance

Wage type master sheet

No laborious switching between the many settings tables of the wage types required

Convenient selection for desired wage types
