Ingentis distribution.list

Intelligent management of dynamic distribution lists and security groups

Solution Description

With Ingentis distribution.list you create dynamic email-distribution or security groups fast and uncomplicated. The members of these groups are determined based on custom conditions which can easily be configured according to your requirements. The dynamic distribution groups can be synchronised with leading systems such as Active Directory, Exchange or IBM / Lotus Notes.

Regular synchronisations ensure up-to-date groups which can be used as E-mail distribution lists, as security or universal groups.

Implemented Functionalities

INTERFACES TO LEADING DATA SOURCES

Including HR systems, databases, directory services and flat files

SYNCHRONISATION WITH TARGET SYSTEMS

Time-controlled synchronization of groups with MS Exchange/Active Directory, Lotus notes or flat files

INTELLIGENT GROUPS BASED ON CUSTOM CRITERIA

Users matching the pre-defined criteria are added to the membership list.

AUTOMATED DATA SYNCHRONISATION

No need to manually update data in Active Directory

MAILING FEATURE

Launch email distributions straight from Ingentis distribution.list

Client Advantages

Compatible with numerous data sources

Uniform master data: no need for double data administration

Reliable, always up-to-date lists and groups

Group generation and e-mail distribution with one tool

Easy access management

Reliable execution of commands
