Ingentis business rule trigger

Automate the maintenance of your core HR data in SAP SuccessFactors. Changes are automatically propagated to all linked objects within the structure.

Solution Description

Ingentis business rule trigger is an add-on for SAP SuccessFactors. It reduces manual work through an automated process of quick distribution and mass processing of HR core data. The software enables the execution of business rules maintained in SAP SuccessFactors according to the push principle.

Ingentis business rule trigger recognises changed and newly created objects and executes the business rule along a freely configurable evaluation path. The process can be triggered manually or scheduled (e.g. every night).

Implemented Functionalities

AUTOMATED MAINTENANCE OF HR CORE DATA IN SAP SUCCESSFACTORS

Identification of new and edited objects and execution of the “edit and save” action for all linked objects

TRIGGER FREELY DEFINABLE BUSINESS RULES IN SAP SUCCESSFACTORS

Triggering of individual business rules along a freely configurable evaluation path

SCHEDULED OR MANUALLY TRIGGERED EXECUTION

Triggering of the process automatically on a regular basis or manually

Client Advantages

Reduced manual effort when it comes to data maintenance and validation

Fast creation and bulk edits of core data

Improved data quality thanks to the avoidance of data inconsistencies

No need for duplicate data maintenance

Great flexibility by using existing SAP SuccessFactors business rules
